

## **Managing Urban Ecosystems for Goods and Services**

Kevin J. Gaston  
Environment and Sustainability Institute  
University of Exeter

The importance of maximising the provision of ecosystem goods and services – the benefits that humans gain from the environment – within urban systems is increasingly well recognised. However, these systems present very particular combinations of challenges and opportunities for the management of those goods and services. This talk will explore some of the key issues, and the role of tools from applied ecology in determining solutions.
