

Sustainable, Resilient Urban Infrastructure

Christopher A. Kennedy
Department of Civil Engineering
University of Toronto

The presentation summarizes a number of contributions towards understanding the development of sustainable, resilient urban infrastructure. These include:

- i) work for the OECD on mobilizing private investment in low carbon climate resilient infrastructure, including potential virtuous cycles to support low carbon growth;
- ii) research on urban metabolism and GHG emissions from global cities;
- iii) case studies of synergies between climate adaptation and mitigation in development in the cities of Amman, Jakarta, and Dar es Salaam;
- iv) studying the energy stored in cities as a measure of resilience.
